

## 10 YEARS OPTIMISING GLUING PROCESSES

*Achieving efficient and sustainable adhesive application with hot melt or cold glue at packaging lines is their business. At the PPMA in Birmingham, Robatech Gluing Technology and W.H. Leary Ltd will celebrate 10 years of partnership in the UK and Ireland. Visitors can pick up their freshly glued gift at Robatech's trade fair booth, joining the celebration.*

**10-year anniversary.** The partnership between Robatech and W.H. Leary Ltd provides the folding carton industry with a single point of sale for gluing equipment and quality assurance. Both companies combined their expertise in September 2014 when W.H. Leary Ltd became the exclusive distributor of genuine Robatech equipment, spare parts, and service to customers in the UK and Ireland. The company operates under the trading name Robatech Gluing Technology and is based in Basildon, Essex.

**At the PPMA trade show from September 24–26, 2024,** Robatech will invite visitors to celebrate this anniversary with the local team. Interested parties can experience live at the demo belt how the electric jetting head Volta will glue a special gift for them. Volta allows to apply the dotting mode that can reduce glue consumption by up to 50 %. With over 1 billion operating cycles the application head belongs to the long lasting ones in its class.

Besides the energy efficient, high-end Vision melter and Performa heating hose, visitors can find gluing equipment for bead, dot, curl and coating applications. For manual applications such as custom shipping boxes, trays or similar cardboard products, Robatech will showcase the small Easy melter in combination with the EasyStar hand applicator. This practical system stands out due to its ease in operation and tailored glue consumption to simple adhesive applications.
